

## Form Validation

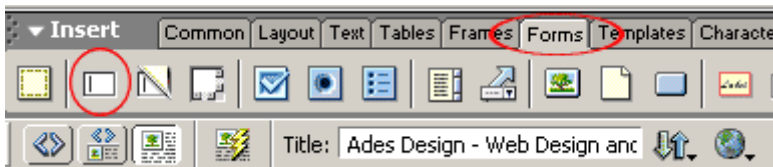

Note: This tutorial is done by Macromedia Dreamweaver MX.

- 1 First create a new page and save it as **form.html**

Go to and **Insert > Form** and after inserting from, point your cursor inside the Form field and go to **Insert > Table** and enter the values as shown below. Then click **OK**

- 2 After inserting table, type on the left side **Name** in first row, **Email** in the second, and **Comments** in the third row. On the right side insert **text field** to every row.

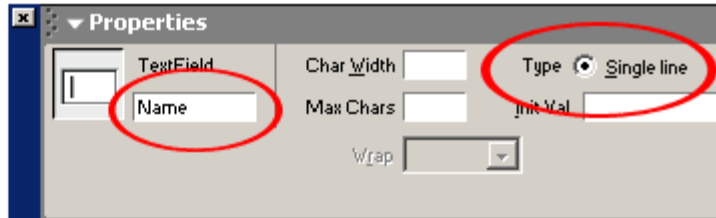

- 3 Select the first text field in the first row and give it a name of **Name** in the properties field, it should be single line.

Name:

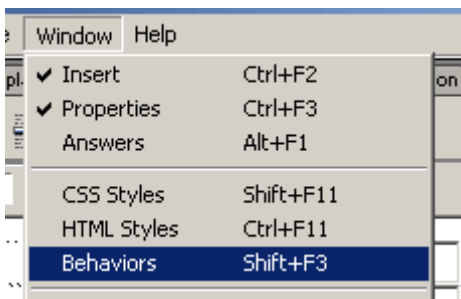

Email:

Comments:

Select the second text field in the second row and give it a name of **Email**, it should be single line too. Now for the third one, give it a name of **Comments** and instead of single line choose multi line. After the **Comments** text field insert a **Submit** button.

**4** Now go to **Window > Behaviors**

Now select the **Submit** button and click on the + on the **Behaviors** toolbar and Select **Validate Form**

**5** Now from the pop up window select **Email** and choose **Required** checkbox and **Email Address** radio button. For the **Comments** just choose **Required** check box with **Anything** radio button.

**Validate Form**

Named Fields:

- text "Name2" in form "form1"
- text "Email2" in form "form1" (RisEmail)
- text "textarea" in form "form1" (R)

Value:  Required

Accept:  Anything  Number

Email Address  Number from  to

OK  
Cancel  
Help

Click **OK**

**5**

Save your file and open it in browser, **F12**. Now test it, try to submit without filling up anything, try to enter email without @ sign...etc.
