

• Free Web Space

- **[ZeroCatch](#)**

One of the best free Web hosters that we've seen yet, ZeroCatch offers you 100 megs of space. This banner-ad supported hoster has speedy, reliable servers. Features here include FTP support, site promotion and more. If you're looking for an added draw for your site, check out their "partnership" program, which lets you become a free Web space provider yourself.

<http://www.0catch.com/>

[Blogger](#)

Would you like to publish on the Web, but don't want the hassle of having to set up a Web site? Then you should explore Blogger, a free online tool that lets you post content on the Web instantly. Blogger, a popular service owned by the search engine [Google](#), lets you quickly and easily set up a custom "blog" (short for "Web log").

<http://www.blogger.com/start>

- **[Tripod](#)**

The second largest free Web page service (after [Yahoo! GeoCities](#)), Tripod gives its members a choice between pop-up ads and embedded ads. You get 20 megabytes of space for your site at this service, which now has over 4 million members and which is owned by search portal [Lycos](#). Here, you have two options: if you're a beginner, you can use the "Quickpage" option if you want Tripod to write your page's coding. If you know HTML coding, you can do it yourself through the "Custom" option.

- Tripod offers support for [Microsoft FrontPage](#) extensions, which means that if you own this commercial Web authoring package, you have more flexibility in what you can do with your site, (such as the ability to easily add text searches). However, we've had a number of complaints that Tripod's FrontPage server is slow and buggy.

- **UPDATE [Yahoo! GeoCities](#)**

A part of search portal Yahoo's empire, GeoCities is the Web's largest free space provider, with over 5 million "Homesteaders." An ad-supported service, GeoCities offers you 15 megabytes of space and 3 gigabytes of data transfer (bandwidth) per month. You start out by staking your claim in a GeoCities "neighborhood" that offers pages with similar themes to yours. You submit an application and are given a password for use in creating your Web site. You may then use the "Yahoo! PageBuilder" utility here to create your home page.

- Like many Web hosters, Yahoo! GeoCities is heavily promoting its premium commercial services these days. However, free hosting is still available here (just look for the "get started with a free GeoCities home page" text link).
- GeoCities has eliminated the problem of its once-cumbersome, lengthy URLs via an improved naming scheme, which means that you can have a shorter URL, such as <http://www.geocities.com/zeeprojector>.
- Some of our visitors report periodic access woes here. A number of complaints have also been posted on [Yahoo! GeoCities'](#) message boards lately about vanishing pages. We've also had complaints that support is difficult to obtain. However, other visitors report that assistance is readily available through the service's "Community Leaders," who may be reached via E-mail or [ICQ](#).

[Angelfire](#)

A major free Web space provider that is owned by search portal [Lycos](#), Angelfire offers 20 megabytes of space and supports [FrontPage](#) extensions. You may advertise your business here, but you may not have paid advertising banners on your page. Angelfire offers lots of helpful

advice for getting you up and running with your own Web site, even if you're new to Web site authoring.
